

***An aviation company\* focusing on flight training, maintenance, logistics, and more currently uses BLR's Safety ToolBox Trainer and Safety.BLR.com<sup>®</sup> to simplify training and recordkeeping obligations.***

\*Due to the sensitive nature of our client's business as a government contractor, we are redacting their name.

*"I love it [The Safety ToolBox Trainer] because people can see it when they come back after two weeks of leave. I love it as the administrator, because I can see exactly what they are doing and when they are doing it, and who attended the training." –VP of Operations*

## BLR Resources Used

**Safety.BLR.com<sup>®</sup>**

## Challenge

Before getting BLR's Safety ToolBox Trainer, this aviation company had an antiquated system for training and recordkeeping in place. When the vice president of the company was hired, he started looking for ways to make things more efficient. With staff in the field, he needed to be able to train employees, document training, quiz employees, take notes, and see results while on the go.

## Solution

When the vice president was assessing his programs, budget, maintenance, safety, and personnel staffing, he came across a special program the company used that focused on preventing harm to people, the environment, property, and equipment. He also discovered that his company had access to Safety.BLR.com, but saw limited usage among his team.

After meeting with a BLR solutions expert, he implemented Safety.BLR.com into his workflow, requiring his employees to use it on a daily basis. That, combined with their current safety program, has helped the number of incidents drop dramatically.

In early 2017, the company found out about the Safety ToolBox Trainer, and it hasn't looked back. It uses the all-in-one application daily in order to streamline training, recordkeeping, and employee progress. "The Safety Toolbox Trainer is web-based so I can actually go on my cell phone and pull it up. On Monday mornings, I go into the Safety Toolbox trainer Web product, and I can see that everybody did training," the vice president said.

With the combined usage of Safety ToolBox Trainer and Safety.BLR.com, the incidents just keep dropping. In addition to the safety benefit, he's also saving time and achieving his goal of streamlining training and recordkeeping.

## Results

Since its implementation of BLR's Safety ToolBox Trainer and Safety.BLR.com in 2017, this aviation company has seen a decrease in incidents. See the below chart from its safety program.
